This sounds like a PIO and/or Area Command question so I am cc those folks on this reply.

CC's please see email below.

Subject: GKM ? from DOE

Lisa:

I'm working with Lisa MV on some response for the Department of Energy. Can you tell us whether there are any intakes in any of the impacted areas that are still shut-off or restricted in any way? We're trying to answer the following question.

1. There are several states downstream due to drought conditions that are experiencing drought that had been pulling water possibly from the San Juan, Animas and Colorado rivers. What are the plans for those communities to get water now that restrictions for intake from those sources exist?

Thanks,

Laura Jenkins
